GEOG 489: Programming for GIS

Spring, 2022 2:00 – 3:20 PM Tuesday and Thursday Room 1020, Natural History Building

Instructor Information

Jinwoo Park, Ph.D.
Postdoctoral Research Associate
Department of Geography and Geographic Information Science
CyberGIS Center for Advanced Digital and Spatial Studies (CyberGIS Center)
University of Illinois at Urbana-Champaign

Contact Information

E-mail: jparkgeo@illinois.edu

Office Location: Room 1060, Natural History Building, 1301 W Green St, Urbana, IL 61801

Office Hours

In-person: 3:30 PM - 4:30 PM, Tuesday and Thursday @ Room 1044, Natural History Building, 1301 W Green St, Urbana, IL 61801

Virtual: If the office hour above does not work for you, please reach out to the instructor via email(jparkgeo@illinois.edu) to schedule a meeting over Zoom.

Course overview/description

GEOG 489 (Programming for GIS) is the course of 4 undergraduate hours and 4 graduate hours and introduces Python programming skillsets to customize and extend the capabilities of Geographic Information Science (GIScience). As the importance of programming is highlighted throughout the discipline of geography, not limited to GIScience, the job market and community is actively looking for candidates who can handle data effectively and efficiently. To meet the needs, the topics of this class include programming principles, advanced function and tools coding, visualization, fundamental spatial data structures, and spatial algorithms, but are not limited to. The course is primarily a combination of lecture and hands-on programming workshops so that students will be taught how to customize existing spatial analysis tools to meet their needs with well-known Python packages, such as GeoPandas, Pysal, GDAL, etc. Students are also expected to run projects as a team to experience how to organize Python code with the geospatial libraries for their needs and taste.

Prerequisite: GEOG 379 and GEOG 380 or equivalents, or consent of instructor.

Course-level learning objectives

Successful completion of this course will enable the student to:

- Learn the basics of programming using Python and CyberGISX.
- Programmatically access GIS data and use these data in GIS modeling, computation, visualization, and analysis.
- Conceptualize, design, plan, implement, and document a custom GIS programming solution to a real-world problem.

Course structure

The course will focus on programming in Python. Each week, we will cover background knowledge on Tuesdays and hands-on workshops or labs on Thursdays. The materials for each week will be distributed via https://learn.illinois.edu and https://github.com/jparkgeo/GEOG489 every Monday. For the lab weeks, students will be assigned labs on Thursday and have a week to turn them in. For example, a lab assignment distributed on Feb 3rd should be submitted by Feb 10th at midnight (before Feb 11th).

Computational Resources

Students will have access to and are recommended to use the CyberGISX platform (https://cybergisxhub.cigi.illinois.edu/) using their university account throughout the course. The instruction of getting access will be provided during the first week.

Textbooks (No needs to purchase, both are accessible online through the library website)

- Garrard. (2016). Geoprocessing With Python (1st edition). Manning Publications. ISBN 1-61729-214-1
- Toms, van Rees, E., & Crickard, P. (2018). *Mastering Geospatial Analysis with Python* (1st edition). Packt Publishing. ISBN 1-78829-333-9

Grading

Grade assignments will be made by converting your points earned to a percentage and compared to the following grading scale:

```
93.33% -100.0%
Α
       90.00% -93.32%
A-
B+
       86.67% -89.99%
В
       83.33% -86.66%
B-
       80.00% -83.32%
C+
       76.67% -79.99%
C
       73.33% -76.66%
C-
       70.00% -73.32%
D+
       66.67% -69.99%
D
       60.00% -66.66%
F
       60%
```

Grade Breakdown and Guideline

- Class participation (10%)
 - Two absences without notice are allowed. However, more than that will take off 1 point from the maximum of 10 points. In other words, 12 absences will cause no credits from the class participation.
- Labs (40%; 5 points * 8 labs)
 Students will have a week to finish. Late submission will take out a point per day.
 Extra points will be assigned as challenge questions throughout the labs.
- Research Project (25%; Detailed rubric will be announced during the class)
 - o 10 points from the instructor
 - o 10 points from classmates (Inter-team review)
 - o 5 points from teammates (Intra-team review)

- Exams (25%)
 - \circ Midterm (15%) Scheduled on March 10th, 2 pm 3:20 pm.
 - o Final (10%) − Scheduled on May 11th, 7 pm − 10 pm.

Communication Protocols

The instructor will attempt to respond to emails during the weekdays within 24 hours of receiving them. Therefore, please do not expect an immediate response and plan accordingly, although the instructor will respond as soon as possible. If you send an email over the weekend, please do not expect any response until Monday or Tuesday morning.

Academic Integrity

Each student is expected to be familiar with the UIUC definitions and policies on academic integrity: https://studentcode.illinois.edu/article1/part4/1-401/, and adhere to the student code of conduct. Cheating on the exams or assignments will be reported to the university with a default sanction of getting a zero (0) on any assignments or exams the student has cheated on. Note that while you may discuss the laboratory assignments with your classmates, you must turn in your own work, written in your own words. Turning in identical assignments as another student is considered cheating.

Course Schedule (The instructor has the right to change the syllabus as needed to make the course more informative.)
